Summary

Software engineer with 2+ years of experience, mostly in financial services, across backend development, databases, and test automation. Builds Java/Spring Boot services, writes and optimizes SQL on PostgreSQL, and turns business rules such as contract validation, multi-currency transactions, and financial reporting into tested code. Uses LLMs and AI agents daily to automate work and build faster. Long-term goal: software architecture.

Experience

- **Swiss Re** — Bratislava, Slovakia
  Junior Software Engineer — *12/2023 – 04/2025*
  - **Backend Development**: Designed and implemented Java/Spring Boot microservices for validating inter-entity reinsurance contracts and processing multi-currency financial transactions across global legal entities.
  - **SQL & Database Performance**: Refactored PostgreSQL schemas and removed N+1 query bottlenecks in legacy migration workflows by consolidating redundant database calls, significantly reducing migration runtime.
  - **CI/CD & Cloud Deployment**: Owned CI/CD pipeline configuration and containerized deployment of RESTful APIs to Azure, adding automated quality gates to enforce code standards across services.
  - **Testing & Reliability**: Built unit and integration test coverage (JUnit, Mockito) for business-critical financial reporting modules, setting code coverage targets that prevented production regressions.
- **IT-Development** — Bratislava, Slovakia
  Web Developer — *02/2023 – 06/2023*
  - **Frontend Engineering**: Maintained and improved internal Angular applications, fixing UI/UX bugs in vendor workflows for telecommunication asset management.
  - **Data Visualization & API Integration**: Integrated user interfaces with RESTful web services and handled data visualization for hardware specifications, real-time antenna status tracking, and infrastructure digital twins.
- **Fiserv** — Bratislava, Slovakia
  Test Automation Engineer — *06/2022 – 01/2023*
  - **Automation Frameworks**: Built automated front-end test suites with Appium and Selenium covering core user flows, replacing full-day manual regression rounds and cutting testing effort by about 90%.
  - **Code Refactoring**: Refactored test cases and maintained the framework to reduce execution time and keep Jenkins CI/CD pipelines reliable.
  - **Documentation**: Wrote technical documentation in Confluence and inline code reference guides to share knowledge across teams.

Education

- **Slovak University of Technology (FEI STU)** — Bratislava, Slovakia
  Bachelor's degree in Computer Science — *09/2022 – 06/2026*

Technical Skills

- **Languages**: Java, SQL, Python, TypeScript, JavaScript, C
- **Data & Analytics**: PostgreSQL, Pandas, NumPy, data modeling, query optimization, data validation
- **Frameworks**: Spring Boot, JPA/Hibernate, REST APIs, Angular
- **AI & LLMs**: AI agents (Claude Code, Cursor), prompt engineering, LLM APIs (OpenAI, Claude), agentic workflows
- **Tools & Testing**: Git, Docker, Azure, Jenkins, Gradle, Postman, Jira, JUnit, Mockito, Selenium, Appium, JMeter
- **Languages (Spoken)**: Slovak (Native), English (C2), German (B1)
